This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently Amended) A method for receiving performance information over a network for generating a pseudo-live performance, the method comprising:

detecting a need for the performance information, wherein the step of detecting a need for the performance information comprises one or more of: determining a time of a previous information reception event, detecting a status of a storage device, and accessing a profile;

selecting a process for obtaining the needed performance information; [and] executing the process for obtaining the needed performance information; and generating the pseudo-live performance by mixing information corresponding to one or more portions of the needed performance information with other information.

- 2. (Cancelled)
- 3. (Currently Amended) The method of claim [2] 1, wherein the profile indicates one or more of:
 - a type of information desired by an end-user;
 - a schedule of an end-user; and
- scheduled times at which information is transmitted by a performance transmitter.
- 4. (Original) The method of claim 1, wherein the selecting a process comprises determining whether a performance transmitter can receive an information request.
- 5. (Original) The method of claim 4, wherein the determining whether a performance transmitter can receive an information request comprises one or more of:
 - transmitting a query signal to the performance transmitter; passively receiving a signal from the performance transmitter; and

accessing a profile.

- 6. (Original) The method of claim 4, further comprising:
 generating an information request; and
 transmitting the request to the performance transmitter via the network.
- 7. (Original) The method of claim 1, wherein the selecting a process comprises determining an appropriate time to receive information from a performance transmitter.
- 8. (Cancelled)
- 9. (Currently Amended) The method of claim [8] 1, wherein the step of generating the pseudo-live performance compris[ing]es:

retrieving the other information; decoding one or more commands of the other information; and performing one or more tasks instructed by the commands.

- 10. (Original) The method of claim 9, wherein the one or more commands includes one or more of programming commands that execute a software program, housekeeping commands that load, delete, change or overlay stored information, and performance commands that reproduce stored information from one or more specified locations of a storage device.
- 11. (Cancelled)
- 12. (Cancelled)
- 13. (Cancelled)
- 14. (Currently Amended) A pseudo-live performance generator, comprising a controller that:

detects a need for performance information by one or more of: determining a time of a previous information reception event, detecting a status of a storage device, and accessing a profile;

selects a process for obtaining the needed performance information; [and] executes the process; and

generates the pseudo-live performance by mixing information corresponding to one or more portions of the needed performance information with other information.

15. (Cancelled)

16. (Original) The pseudo-live performance generator of claim 15, wherein the profile indicates one or more of:

a type of information desired by an end-user;

a schedule of an end-user; and

scheduled times at which information is transmitted by a performance transmitter.

- 17. (Original) The pseudo-live performance generator of claim 14, wherein the controller determines whether a performance transmitter can receive an information request.
- 18. (Original) The pseudo-live performance generator of claim 17, wherein the controller performs one or more of:

transmitting a query signal to the performance transmitter; passively receiving a signal from the performance transmitter; and accessing a profile.

- 19. (Original) The pseudo-live performance generator of claim 17, further comprising: a request generator that generates an information request, wherein the controller transmits the request to the performance transmitter via the network.
- 20. (Original) The pseudo-live performance generator of claim 14, wherein the controller

determines an appropriate time to receive information from a performance transmitter.

21. (Original) The pseudo-live performance generator of claim 14, wherein the controller generates the pseudo-live performance by mixing information corresponding to one or more portions of the needed performance information with other information.

22. (Original) The pseudo-live performance generator of claim 21, wherein the controller:

retrieves the other information; decodes one or more commands of the other information; and performs one or more tasks instructed by the commands.

23. (Original) The pseudo-live performance generator of claim 22, wherein the one or more commands includes one or more of programming commands that execute a software program, housekeeping commands that load, delete, change or overlay stored information, and performance commands that reproduce stored information from one or more specified locations of a storage device.

24. (Cancelled)
